

The 16th International Summer School on Crystal Growth

ISSCG-16

Lake Biwa, Shiga, Japan

August 1st - 7th, 2016

Basic Concepts

Researchers who are playing active roles in frontiers of wide-ranging fields of crystal growth will give lectures on a wide array of topics ranging from instructive topics to the latest topics. Students will therefore have an opportunity to systematically learn about crystal growth from its fundamentals to its applications. All of the lecturers and students will stay in the same lodging for six days. The friendly and at-home atmosphere will be a valuable opportunity for both lecturers and students.

Features

In addition to stimulating lectures, we are also planning to hold 4 or 5 courses for enthusiastic discussion, including experiments and simulation. Lecturers will also participate in the discussion. Through such discussion, students will obtain deeper understanding on crystal growth. We also plan to hold poster presentations in which students can have in-depth discussion with lecturers and other participants.

2001, Otsu, Shiga, Japan

2012, Sendai, Japan

Members

Chair

Gen SAZAKI
Hokkaido University

Vice Chair

Hiroki NADA
AIST

Vice Chair
